

This 30,000 square foot facility was constructed in 2006 as an office building and has been renovated to be a fully customizable, flexible data center. Rosendin was contracted to provide reliable electrical construction services for an aggressive, fast-track renovation project that consists of a complete redundant electrical distribution system, including uninterrupted power source system, three (3) diesel generators, fire alarm, security and telecom systems with an overall capacity of 4.5 megawatts.
