

Exelixis is now headquartered in Alameda's Waterfront at Harbor Bay in a large, modern campus with state-of-the-art labs and additional office space, providing a strong foundation for Exelixis' long-term vision and growth. The design-build relocation project included the renovation of two buildings. The existing buildings were demolished down to the core structure and re-purposed for Exelixis' needs and standards. The scope included all new mechanical systems, electrical distribution, and new roofs on both buildings. The project was delivered seamlessly, helping our client's employees continue their critical work without interruption.
