

The campus of octagonal pods and atriums was initially built as the headquarters for a telecommunications satellite company in the 1980s. Rosendin's scope of work included upgrading over 580,000 SF of lighting, fire alarm systems, and power infrastructure to support innovative technologies. The modern renovation and fit-out will take the facility from office space to a high end, state-of-the-art, private boarding school including 200 residential areas, open design classrooms, music rooms, recording studio, performance hall, black box theater and art and athletic pods.
