

## Los Angeles Memorial Coliseum

LOS ANGELES, CA

\$315 million renovation to historic LA Memorial coliseum.

The \$315 million LA Memorial Coliseum project was completed in August 2019, just in time for the start of the USC football season. The historic stadium opened in 1923 and has served as a host venue for the 1932 and 1984 Summer Olympics; it will once again host the Summer Olympics in the upcoming 2028 games with its new ground up, 7-story tower that includes beautiful new suites and concession stands, a state-of-the-art press box along with an upgrade to entryways and walkways surrounding the stadium. New concrete was poured at the north and south seating areas, and all new seats were installed. The stadium was further enhanced with Wi-Fi installed in the seating areas and tower, video boards in the suites and concession areas, and a wonderful open-air bar and seating area on level 7. The historic stadium that opened in 1923 and has served as a host venue for the 1932 and 1984 Summer Olympics; will once again host the Summer Olympics in the upcoming 2028 games.

The Rosendin team did an excellent job on this project, as witnessed by the fact electrical, low voltage, and audio-visual all took home NECA awards for our efforts! This project was a team effort and a perfect facelift for a tradition-rich stadium that will serve future generations.
