

## Daily Toolbox Talk: Take Action & Thank You Friday, May 10th, 2024

We all have a voice in safety. There is nothing we do that is worth risking our lives or the lives of our fellow team members. Empowering our craft to raise their concerns and act goes beyond simply talking about it at Monday toolbox meetings. Everyone has a voice to make safe choices.

Our craft team members must be given the resources to speak strongly without hesitation, but we must also have systems in place that offer them the ability to act, provide creative solutions, and make safe choices. Below are some ways Rosendin employees can get involved engaging in our safety processes.

- **STOP Work Authority-** Employees can stop work without fear of reprimand or retaliation, to immediately stop a work activity that presents a danger to them, a co-worker, or the public.
- **CEP** – The Craft Empowerment Program is an excellent tool that ensures all craft are represented and everyone has a voice. Create a jobsite board that lists all the concerns, suggestions and solutions raised by the craft and the responses. Use the CEP meeting minutes template to show progress.
- **PTWP Collaboration** – Supervision solicits craft team members to help develop Pre-Task Work Plans. They are solicited for their specific feedback on tasks and risk mitigation solutions.
- **Incident Review** – Bring team members in to review the details of an incident or near miss without fear of reprimand. What insights can they offer into potential issues that may have led up to the incident? What solutions would they recommend to prevent similar incidents in the future?
- **Safety Suggestions-** Actively listen to employee ideas on safety to improve jobsite conditions.
- **Walk With A New Employee-** Take the time to meet with new employees explaining Rosendin’s Safety culture and processes.
- **Field Walks** – Supervision and craft team members walk the site and observe the work. What suggestions do they have to improve safety?
- **Recognition Program** – Be sure to recognize the efforts of any team members that create effective solutions to safety concerns. Some of the most effective methods of recognition are the simplest, such as a thank you from executive management. It is important that recognition is given at mass toolbox meetings to help reinforce the importance of speaking up and creating solutions.

These are just a few examples we can use to create a culture that removes the stigma of raising concerns and offers effective ways for our team members to act and engage.

In closing, we want to thank you all for your participation in Safety Week 2024! Together we are working to make our industry safer, and that takes a commitment from us all. Our topics this week are designed to empower everyone to speak up and be strong in our efforts while improving our ability to recognize and manage risk and make safe choices. We know it’s a collaborative effort and one that we all must participate in. Because of your dedication, our industry is better today than ever before. Let us keep our focus on continual improvement and build a construction industry that is better and safer for all.

From all of us to all of you, THANK YOU!
